Sycada - Your partner in Managed Mobility

Sycada is an internationally operating company with 15 years of experience in developing and managing mobility solutions for clients across industrial and service organizations. More than 500 satisfied clients make use of Sycada's services and more than 40.000 remote assets are equipped with Sycada's mobile technology.

You can trust Sycada to design, deliver & manage your complete mobile solution!

- ❶ Cross-European operations and support
- ❶ 'Off-the-shelf' solutions as well as customization to specific client needs
- ❶ Robust and scalable infrastructure for safe and reliable mobile communications
- ❶ Hosting, management and support performed by Sycada
- ❶ Solution can be integrated with your existing systems
- ❶ Flat-fee European/Global SIM connectivity

Sycada offers you a range of different mobile solutions, including GPS tracking & tracing, Connected Navigation, as well as remote and transported asset monitoring and protection. All solutions build around a robust infrastructure and covered by solid service level agreements. Full transparency, no surprises!

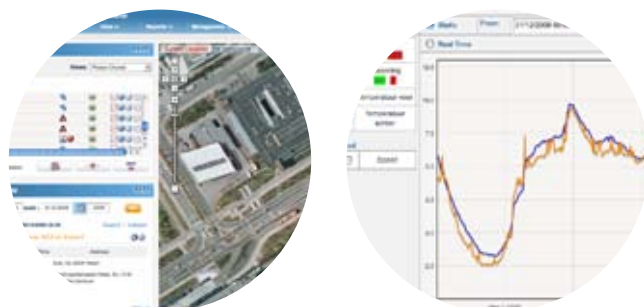

Protect your assets!

Sycada is dedicated to help you fight cargo crime! We offer specialized GPS tracking & monitoring units for vans, trucks, trailers, containers and pallets as well as personal tracking devices with man-down alarm feature to protect your drivers. Our application offers you insight into the exact location of your assets and provides immediate alerting by exceptional events and/or alarms.

In addition, Sycada can help you actively monitor your conditioned cargo with high-quality digital and analogue sensors.

The benefits in terms of asset protection and operational efficiency are real and we help unlock them!

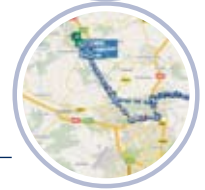

- ❶ Instant notification upon critical incidents
- ❶ Full evidential trail
- ❶ More efficient repatriation/recovery of assets in case of theft
- ❶ Full insight in deployment of assets at all times
- ❶ Improved utilization of assets
- ❶ Direct response to customer queries
- ❶ Proof of service reporting to customers

Security & monitoring functionality

Track & Trace

-  Sycada's full tracking & tracing functionality with direct access to location and sensor data from any PC with Internet access.
-  Your installed base can be grouped according to type of asset or region.
-  If desired, your business partners or customers can be granted access to relevant assets and for specific time periods.

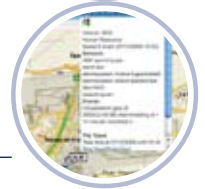

Active alerting

-  Notifications can be generated when assets leave or arrive at predefined locations
-  Proactive monitoring of entry/exit of geo-fenced zones is facilitated.
-  Alarms are generated if doors have been opened outside of approved locations.
-  Alerts are generated if assets have been moved outside approved operating times.

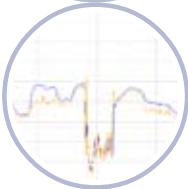

Cargo condition monitoring

-  Sensors can be used to monitor temperature and/or relative humidity. Real-time or historic reports in sensor values can be generated.
-  Proactive monitoring of sensor ranges can be performed allowing immediate alerting if values fall outside defined ranges.
-  Client specific reports can be generated for conditioned transport.

Detailed operational reports

-  All movement of assets are accounted for and can be reported on.
-  Sensor reports are available in 'Proof of Compliance' formats.
-  Pre-defined reports can be automatically be generated and forwarded to authorized 'subscribers' by e-mail.

Systems integration & collaborative use

-  ERP, TMS and other planning systems can be interfaced with Sycada's system infrastructure. This allows for two-way exchange of data, including loading/unloading locations and status information.
-  Your business partners (e.g. charters) and customers can be granted selective access to position and sensor data or reporting.
-  Alarm centers and/or recovery services can be interfaced and authorized for instant follow-up upon alarms.

Specialized GPS / Alarm units

Guardian

- Super ruggedized, battery powered GPS tracker for trailers, containers and non-powered assets
- Up to 4 years tracking autonomy on a single battery
- Integrated movement and door sensors
- Easy mounting with super magnets
- Adjustable reporting intervals (timed, interval, movement, events)

Spider

- Ruggedized, battery powered GPS tracker for pallets and boxes
- On/off button facilitates very specific tracking scenario's
- Can be used in conjunction with trailer or container tracking devices
- Adjustable reporting intervals (timed, interval, movement, events)

Xtreme

- Super ruggedized GPS tracker for trailers suitable for real-time tracking & tracing and cargo condition monitoring
- Supports multiple door and temperature sensors and suitable for cool chain control scenario's
- Allows for route corridor monitoring and alerting if assets deviate from planned route
- Allows interfacing with electronic lock systems for geo-based authorization of trailer access
- A CANbus version is available for detailed asset utilization reporting

Trailer

- Same specifications as Xtreme but with 4 large batteries for long-term tracking & cargo monitoring without power supply from truck
- Possibility to add solar-panel for complete tracking autonomy
- Works with wired and with multiple wireless sensors in case more cargo zones need to be actively controlled

Beacon

- Stand-alone trailer alarm system working similar to a car alarm (arming/unarming functionality)
- Unit produces a deafening sound and light if trailer door is opened while armed thus drawing immediate attention to the trailer in question
- The trailer alarm can be linked to the Xtreme GPS unit for GPS-based alerting of alarm centre.

Mini

- Personal GPS tracker with alarm functionality and man-down alerting providing drivers with additional safety during high-risk transports
- Push-to-call functionality allows voice communication with alarm centre
- Call-in functionality allows alarm center to 'listen in' on drivers in man-down situations
